Carl “Isa” Perez

DevOps Engineer

Email: carlp941@gmail.com · **GitHub:** isa-p941 · **Website:** perez.wiki · **Location:** Aurora, CO

Experience

DevOps Engineer - CU Boulder

Jul 2019 - Present

Hired as a Unix Systems Engineer; my title changed to DevOps Engineer as my responsibilities grew.

- Development and maintenance of CI/CD and monitoring systems for around 150 Linux hosts using Ansible/AWX, Chef, Red Hat Satellite, Nagios/Naemon, Terraform, GitHub Actions, OpenShift, Vault, and Jenkins.
- Moved several of our internal services onto Red Hat OpenShift, including our Sectigo certificate proxy and AWX, deployed with Ansible, Kustomize, and Vault.
- Built a small Flask broker for Dell OpenManage Enterprise to replace our broken Naemon warranty check, so our hosts can check their warranty status without ever holding the OME service account credentials.
- Help maintain our GitHub organization as code: Terraform and GitHub Actions create new repositories from templates, along with their PR rules, AWX projects, and secrets from Vault.
- Leading Red Hat upgrades from 6 to 8, 7 to 9, and now 8 to 10, from small faculty websites to the Dartmouth Flood Observatory’s ArcGIS application. Supported the move of our Jenkins pipelines and RHEL image builds from pyenv and rbenv to mise.
- Maintain our custom ServiceNow paging service, including its migration from sendmail to Postfix and restricting which domains it accepts mail for. Added certificate based authentication to our centralized log server.
- 24/7 on-call support for critical services across the university.

DevOps Consultant - Fenway Group

Feb 2016 - Jun 2019

- Member of the MX DevOps team contracted to Southwest Airlines for the “largest single MRO system migration in the history of the airline industry,” replacing three aircraft maintenance tracking systems with IFS Maintenix.
- Built Continuous Delivery, Integration, Monitoring, and Failover systems across hundreds of servers with Chef, Python, BASH, and Jenkins, with JUnit, Selenium, SoapUI, and JMeter testing pipelines and JasperReports on Tomcat in an HA environment.
- Wrote Vostok, a Python monitoring program served on Flask that showed the up/down status of every part of the Maintenix stack in all environments.
- Concurrently developed a Node.js application for Wellington Financial consolidating financial data across MySQL, Oracle, and Postgres databases.

Skills

Cloud & Containers: AWS, Azure, OpenShift, VMware, Kubernetes, Docker, Helm, Kustomize
Infrastructure as Code & CI/CD: Terraform, Ansible/AWX, Chef, HashiCorp Vault, Jenkins, GitHub Actions
Monitoring & Observability: Prometheus, Grafana, Loki, Nagios/Naemon, Red Hat Satellite
Languages & Web: Python, Bash, Ruby, Java, JavaScript, YAML, Flask, Node.js, React, REST, JSON
Operating Systems & Source Control: RHEL, Debian, Arch, CentOS, Git, SVN, Bitbucket
Platforms & AI: Atlassian, ServiceNow, Claude, ChatGPT
Methodologies: Agile, Scrum, Kanban

Projects

- **Perez Wiki** *(personal website)*: scripting and web development with Python, BASH, and basic continuous deployment.
- **infra_perez_wiki** *(cloud demo)*: multi-cloud CI/CD and monitoring in Terraform: AWS Jenkins, Azure Grafana/Prometheus/Loki, OIDC federation, one-button deploy/destroy.
- **find_a_flood** *(scripting)*: command-line tool that pulls live NOAA river-gauge data to find potentially flooding rivers near a city.

Education

Louisiana Tech University, B.S. Computer Engineering · Aug 2014 - Feb 2019
